

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

ANNOUNCEMENT

The advisability of establishing an American publication in the field of parasitology has been under discussion for some time. Such a journal is clearly demanded by the increasing amount of work in this field, the growing importance of the subject in its broader aspects as related to disease in man and other animals and the intense biological interest in associated theoretical problems, together with the evident advantages of a representative publication and the lack of adequate opportunity for printing such papers elsewhere.

THE JOURNAL OF PARASITOLOGY will be a medium for the prompt publication of briefer papers and research notes on animal parasites. Emphasis will be laid on the morphology, life history and biology of zooparasites, and the relations of animals to disease. Under present conditions it will not be practicable to print monographic articles, and ordinarily individual papers will be limited to ten or fifteen text pages.

THE JOURNAL will publish the reports of the Helminthological Society of Washington and a brief record of personal and institutional items in parasitology. Individual papers will not usually be reviewed, but books or monographs of noteworthy character and technical methods of marked value will be given appropriate notice. An effort will be made to eliminate the casual notice or abstract; critical summaries by those who are entitled to pass judgment in the special field are welcomed and some such are already pledged.

The final policy of THE JOURNAL will be developed in the light of experience to the end that it may contribute as effectively as possible to the dissemination of knowledge and the encouragement of teaching and research in parasitology.

A guarantee fund subscribed by various individuals and institutions assures the regular appearance of this periodical quarterly at least for a three-year period, so that the Editorial Board will devote its attention to determining broadly the needs of the field and the best methods of serving them.

The expressions of interest and encouragement that have come unsolicited on the appearance of the preliminary announcement indicate clearly the favorable reception awaiting the appearance of the new publication. It will depend for its success on the continuance of this attitude, and to that end welcomes all suggestions as to the methods by which it may best serve the field of science to which it is devoted. It hopes to deserve the approval and continued support of the professional world.

THE EDITORIAL BOARD.

HANDBOOK of MEDICAL ENTOMOLOGY

WILLIAM A. RILEY, Ph.D.

Professor of Insect Morphology and Parasitology, Cornell University
AND

O. A. JOHANNSEN, Ph.D.

Professor of Biology Cornell University

A concise account of poisonous, parasitic and disease-carrying insects and their allies, including descriptions and illustrations of the principle species, with keys for their determination, and methods of control. Bound in Library Buckram, medium 8vo.

About 400 pages

Ready January 1, 1915

THE COMSTOCK PUBLISHING CO., Ithaca, N. Y.

New Spencer Binocular Microscope No. 54

POSSESSES MANY ADVANTAGES:

- I. Accommodates the greatest variation in pupillary distances.
- II. Easily and quickly changed from one stand to the other.
- III. Will take a mechanical stage.
- IV. Black and white backgrounds beneath the stage are always out of the way.
- V. Has sufficient range of adjustment by rack and pinion to bring the objectives to a focus considerably above the plane of the stage, thus permitting the examination of objects of considerable thickness.
- VI. May be used on *three* other types of stands supplied by us (see new 1914 catalog).

Binocular Microscope No. 54 with one pair of objectives and one pair of oculars, complete in cabinet.. **\$60.00**

DISCOUNT TO SCHOOLS

We are headquarters for laboratory apparatus of all kinds: Microscopes, Microtomes, Projection Apparatus, Hemacytometers, Dissecting Instruments, Hand Lenses, Incubators, Sterilizers, Glassware, Chemicals, Stains, etc., etc.
